Improve Traffic Count-Based on VMT	250,000
	<b>800,000</b>

## PREFACE

This work program is a statement of transportation research and development activities that qualify for reimbursement from Federal Cooperative State Planning and Research (SPR) funds. It describes work that will be performed during the program period -- October 1999 through September 2000. Projects completed during the last six months are listed in Section V, which also lists reports published in that period and Experimental Features that were evaluated in SPR projects. This section, along with the rest of the work program, serves as one of two semiannual reports on the research program.

Section VII lists all ongoing non-federally funded research projects. This section along with the rest of this publication presents the total research program.

Section I	Technical Assistance and Technology Transfer Program
Section II	Experimentation Program: Types A & B Continuing Studies
Section III	Proposed Projects Not Yet Initiated
Section IV	Administration/Training
Section V	Completed Projects
Section VI	100% State Funded Projects

All salary allocations included an estimated fringe-benefit factor of 34.85 percent (annual salary x .3485). The actual factor, to be established by the New York State Department of Audit and Control and Division of the Budget, represents the employer's share of workers compensation, hospitalization, retirement-fund charges, and other contributions.

FIGURE 1

# TRANSPORTATION RESEARCH AND DEVELOPMENT BUREAU

**MISSION:** To manage a targeted transportation research and development program to enhance the equality and cost-effectiveness of transportation policies practice, procedures, standards, and specifications. Activities performed to accomplish this mission include applied research, technical assistance, technology transfer, and engineering and statistical

## DIRECTOR'S OFFICE

457-5826

Robert A. Valenti, Acting Director  
Nancy A. Troxell, Secretary I

### STRUCTURES

Dr. Sreenivas Alampalli  
Engineering Research Specialist II

Develops and verifies new structural design techniques and refines existing methods; provides technical consultation and assistance in the area of structures; evaluates load capacity of existing structures through physical testing and analysis; performs finite-element analysis.

Dr. Osman Hag-Elsafi, ERS I  
George Schongar, CE I  
Ryan Lund, CE I  
Jonathan Kunin, CE I  
Harry Greenberg, Lab. Equip. Designer

### MATERIALS/PAVEMENTS

Dr. Wei-Shih Yang  
Engineering Research Specialist II

Develops new and improved specifications for construction and maintenance materials; provides technical assistance in the areas of materials and pavements resulting in more economical pavements, improved service, Optimized performance, and extended service life; performs structural analysis of pavements.

Dr. Luis Julian Bendaña, ERS I  
Cheng Chou, MS, ERS I  
Rick Morgan, CE I  
Tom Van Bramer, CE I

### TECHNOLOGY TRANSFER/IMPLEMENTATION/ SPECIAL SERVICES

Dr. Deniz Sandhu  
Engineering Research Specialist II

Develops and improves specifications and practices in areas other than structures and materials/pavements; provides technical assistance and consultation in various engineering subject areas; provides Department-wide statistical consultation; coordinates Bureau automation.

Ed Bikowitz, PET

### ADMINISTRATION/MANAGEMENT SUPPORT

Dr. Ossama Abd Elrahman  
Engineering Research Specialist I

Prepares annual Bureau budget and monitors expenditures; prepares Bureau publications (reports, newsletters, study proposals) and provides editorial support and consultation for other NYSDOT publications; manages research library and performs literature searches; manages all external research contracts; provides program liaison for such national research programs as NCHRP and pooled funds; develops Bureau operating policies and procedures

Colin Campbell, PRS II  
Lynne M. Webb, CE I, Librarian  
Linda Hoteling, Calculations Clerk II

---

## **SECTION I**

### **Technical Assistance and Technology Transfer Program**

---

**New York State Department of Transportation  
Transportation Research & Development Bureau**

**11-0 INFORMATION EXCHANGE**

As the title implies, this project covers activities providing for the transfer of technical information from one party to another. Other activities charged to this project include coordination of experimental feature work plans, support activities to the NCHRP Program, and coordination of pooled-fund projects. Work performed under this project during the program period includes the following:

1. Julian Bendaña attended the 7th Annual FWD User's Group Meeting in Seattle, Washington and was nominated the chairperson for the Year 2000 User's Group meeting.
2. Julian Bendaña prepared a presentation on concrete pavements for the New York State Association of Transportation Engineers Conference held October 22, 1998 at Pittsford, NY.
3. FHWA invited Deniz Sandhu to attend the "Eastern Winter Road Maintenance Symposium and Equipment Exposition" in State College, PA on September 9 and 10, 1998 to make a presentation on the progress of the FHWA Test & Evaluation Project on Thermal Mapping. Several follow-up actions and technology transfer activities are being pursued based on the information obtained and contacts made during this meeting. These include evaluations of alternative infrared pavement sensors for the collection of pavement temperatures and obtaining information from and disseminating information to a number of states and vendors who have interest or experience in thermal mapping. The Transportation Maintenance Division is particularly interested in the information on infrared sensors which are frequently being requested by Maintenance residencies to monitor pavement temperatures during snow and ice operations.
4. On October 16, 1998, Sreenivas Alampalli of TR&DB and Art Yannotti of Structures Division attended the opening ceremony of the Bennett's Creek FRP superstructure. This is the first FRP superstructure on a state highway; the first with more than 30-degree skew; and the first with integral barriers.
5. October 27-29, 1998, Osman Hag-Elsafi attended the Regional Structures Engineers meeting and the 5<sup>th</sup> Statewide Conference on Local Bridges in Syracuse, New York. During the meeting, he presented preliminary results of a survey on cracking of HP concrete decks. The results were prepared by Sreenivas Alampalli and Frank Owens.
6. Julian Bendaña attended the Association of Transportation Engineers' Annual meeting in Region 4. He made a presentation on PCC pavement design, "Past, Present and Future of PCC Design in NYS."

7. A call for papers was prepared for "Materials Technology: An NDT Conference," that will be co-sponsored by the Department and other states. Sreenivas Alampalli contacted the Society for Experimental Mechanics (SEM) for co-sponsoring the conference. SEM agreed to advertise the conference in their magazine, which has circulation in over 25 countries, and also on their web page. Nancy Troxell was responsible for preparing the call-for-papers and sending them to the professional community. FHWA has committed \$50,000 for the conference.
8. A paper co-authored by Dr. Perry and Dr. Elrahman, "Guidelines for Night-Time Maintenance and Construction Operations" was published in the September 1998 issue of Road & Transport Research.
9. Julian Bendaña attended the first National Symposium on 3D Finite Element Modeling of Pavement Analysis & Design, in Charleston, West Virginia, November 8-10, 1998.
10. Robert J. Perry, Robert Valenti, Sreenivas Alampalli, and Osman Hag-Elsafi met with Dr. Petru Petrina of Cornell University and Dr. Riyad S. Aboutaha of Syracuse University to discuss cooperation between the Bureau and their respective universities. Sreenivas Alampalli will be the contact person to facilitate future efforts.
11. Deniz Sandhu reviewed and offered comments on the progress report of NCHRP Project 20-46 "Systems Approach to Evaluating Innovations for Integration into Highway Practice." The contractor for the project, Worcester Polytechnic Institute, distributed a national survey on the criteria and factors used in evaluating innovations. The results of the survey and in-depth input from the panel members and Massachusetts DOT officials were obtained during a workshop in December in Worcester MA. The project panel meeting to evaluate the progress of the research was held in conjunction with the workshop.
12. On November 6, 1998, Dr. Dale P. Bent and Dr. Chiara Ferraris of National Institute for Standards and Testing (NIST) visited the Department and toured the Materials Bureau laboratories. This is the second visit by NIST staff to the Department to discuss venues for cooperation between the two organizations. During their visit, they met with Robert J. Perry, Sreenivas Alampalli, and Frank Owens of TR&DB, and held a separate meeting with staff members from the Materials Bureau. Sreenivas Alampalli will be the contact person for NIST to facilitate future cooperation.
13. The following papers, coauthored by structures section members, were submitted to the Materials Engineering Congress "Materials and Construction - Exploring the Connection", held in Cincinnati, OH in May:
  1. "FRPs for Bridge Construction and Rehabilitation in New York", by Sreenivas Alampalli, Arthur Yannotti, Jerome O'Connor, and Khuong Luu.
  2. "Performance of Class HP Concrete in Bridge Decks", by Sreenivas Alampalli and Frank Owens.
  3. "Strengthening an RC Cap Beam Using FRP Composites: A Case Study", Jerome O'Connor, Hector Hoyos, Arthur Yannotti, Sreenivas Alampalli, and Khuong Luu.

14. On February 8, 1999, Sreenivas Alampalli attended an awards ceremony sponsored by the Consulting Engineering Council of New York State. The FRP Column Wrap Demonstration Project in Region 6 won a Design Excellence Award, and will be entered in the American Consulting Engineering Council National Award Competition.
15. On February 16, 1999 Salem Faza of Marshall Industries gave a presentation on the company's composite rebar (C-Bar). The presentation was organized by Harry Greenberg and attended by staff members from the Research Bureau, Structures Division, and Materials Bureau. After the presentation, Sreenivas Alampalli sent technical information on the C-Bar to Jerry O'Connor and Ron Mauro of Region 6, who expressed their interest in using the technology on a demonstration project in the Region.
16. NYSDOT received a certificate from CERF (Civil Engineering Research Foundation) in recognition of our efforts in developing Ice Ban Deicing Product, winner of the 1998 CERF Charles Pankow Award for Innovation. Makbul Hossain has been serving HITEC as a member of the Ice Ban Evaluation Panel. This certificate was sent to Edward Fahrenkopf, Director Highway Maintenance Division for display.
17. Sreenivas Alampalli discussed technical cooperation between the Bureau and Dr. Carlos E. Ventura of the University of British Columbia in analyzing bridge testing data. The data was gathered and used for completion of a recent research project in the Bureau. Dr. Ventura expressed his interest in having the data further analyzed, under the Bureau's direction, by one of his graduate students.
18. Julian Bendaña reviewed and commented on the work plan for NCHRP Project 1-38 "Guide on Pavement Rehabilitation Strategies." The project of this study will be a guide on pavement rehabilitation strategies in a format appropriate for publication by AASHTO.
19. Paul Mack and Robert Perry hosted TR&DB's federally-mandated peer exchange. The panel was composed of research managers from Delaware and Rhode Island DOTs. Sam Elrahman represented TR&DB on the panel.
20. A paper coauthored by Sreenivas Alampalli, Jerome O'Connor, and Arthur Yannotti entitled, "High-Performance Composites" was submitted for publication in the ASCE Special Volume on "Advanced Composites for Cost-Effective Rehabilitation."
21. On May 10-12, 1999, Sreenivas Alampalli attended the ASCE Materials Congress "Materials and Construction: Exploring the Connection", in Cincinnati, OH. He moderated a session entitled "Concrete Performance and Production", and made two presentations entitled, "Fiber Reinforced Plastics for Bridge Construction and Rehabilitation in New York" and Performance of Class HP Concrete in Bridge Decks."

22. Wes Yang attended the AASHTO Joint Task Force on Pavement meeting in Baton Rouge, LA on May 19-21, 1999. Topics discussed at the meeting included the AASHTO 2002 Guide; Pavement 2000 Conference (to be held April 25-27, 2000 in Newport, RI); TRB LTPP Program; NCHRP; and FHWA reorganization and pavement-related research program. It was a very productive meeting.
23. Wes Yang and Julian Bendaña attended the FHWA LTPP North Atlantic Regional Meeting in Manchester, NH June 15-16, 1999. Wes made presentation on the NCHRP sponsored LTPP Data Analysis Projects and participated in a panel discussion on the future NCHRP LTPP Data Analysis Projects.
24. On June 15, 1999, Sreenivas Alampalli attended the 13<sup>th</sup> ASCE Engineering Mechanics Conference, which was held in Baltimore, MD, and made two presentations entitled "Advanced Composites for Bridge Rehabilitation" and "Design of Base Plates for Span-Wire Traffic Signal Structures."
25. Wes Yang attended NCHRP Project 20-50 (B) meeting in Washington, DC July 26-27, 1999 to evaluate two project proposals. Research agencies were selected for Project 20-50 (5) "Variation in Pavement Design Inputs", and Project 20-50 (7/12) "Daily and Seasonal Variations in Insitu Materials Properties."
26. Bob Valenti, Wes Yang and Deniz Sandhu attended the AASHTO Region 1 Research Advisory Committee Meeting in Harrisburg, PA, July 19-20, 1999. RAC members adopted a resolution encouraging AASHTO to seek congressional approval for funds supporting Superpave and LTPP activities.
27. Sam Elrahman participated in the 1999 Annual LTAP conference held July 25-28 in Roanoke, VA. The conference examined many different issues related to the LTAP program including peer exchanges, best practices, resources and program leveraging the T2 opportunities.
28. Wes Yang was named the Department's LTPP coordinator, and attended two LTPP meetings in Washington to discuss strategic planning and product development.

**11-01 ENGINEERING SOILS SURVEY**

This project, in conjunction with the Natural Resources Conservation Services (NRCS), provides field sampling assistance, laboratory analysis, and engineering interpretation of the soil types encountered in a surveyed county. Field sampling of soils will be conducted in the counties where NRCS is surveying. The laboratory analysis and interpretations for these soils is scheduled. Next year the field survey has been canceled by NRCS. However, funds will be needed to complete some existing laboratory work and investigate the NRCS computerization of the data.

**11-02 INFORMATION EXCHANGE - Library Operations**

This project covers activities performed by the Bureau's library staff which include accessing current technical information through the maintenance of a collection of technical literature and conducting inquiries to various technical information services, State universities and State libraries to obtain research source material. The following is a summary of some activities performed under this project during SFY 1998 - 99:

1. Reference Questions	564
2. Inter-Library Loans	276
• New Acquisitions	1,158
• Literature Searches	176
• Circulation	796

**NOTE:** The Library was closed for a five-month period from December 1998 to April 1999.

**11-03 INFORMATION EXCHANGE - Newsletters**

The Transportation R&D News continues to serve as a forum for announcement of new publications and new research studies, with occasional feature articles concerning the research program, and is distributed throughout NYSDOT, to FHWA, and to other states. Four issues were published during this program period.

In addition, the TNT technology transfer newsletter continued quarterly publication and distribution to all NYSDOT employees who have engineering titles. Its contents cover a broad range of technological innovation throughout the transportation world, with the intent of encouraging readers to seek further information and possible application within New York.

Starting October, 1999 each newsletter will be published twice a year, alternating every quarter.

Transportation Research & Development Bureau**

**12-0 CONSULTATION**

This project provides a means of rendering advice and/or services in various areas of engineering technology and research methodology, such as design of experiments, instrumentation, and statistical analysis, for which the Bureau staff is uniquely qualified or equipped. Some activities conducted under this project during the program period included:

1. Makbul Hossain performed analysis of MAGIC field logs obtained during the 1997-98 snow and ice control operations. The results were provided to the HITEC ICE BAN technical evaluation panel.
2. Deniz Sandhu reviewed and offered her comments on the contract and final work plan for FHWA pooled-funds study SPR-2(199), "Optimal Acceptance Standards for Statistical Construction Specifications." The contractor for the study is Clemson University. As the Department's representative on the project panel, Deniz is coordinating NYSDOT's response to a request from the contractor to obtain hot mix asphalt and cement concrete specifications.
3. Deniz Sandhu continued working with the technical selection committee to evaluate alternatives to herbicides under guidrails and around signs posts. The RFP was finalized and BAB will be advertising it shortly.
4. At the XVII International Modal Analysis Conference, Sreenivas Alampalli met with Dr. Titus of Romania, to discuss his future work at the Bureau on time-domain analysis of bridge vibration. Dr. Titus worked at the Bureau for one month from June to July, 1999.
5. As a member of the technical selection committee to evaluate alternatives to herbicides to control vegetation under guide rails and sign posts, Deniz Sandhu received 36 proposals submitted in response to the Department's request for proposals. The preliminary evaluation of the proposals was completed in March and follow-up information will be requested from submitters of promising alternatives. Deniz also had several meetings with representatives from the Transportation Maintenance Division, Environmental Analysis Bureau, Landscape Architecture Bureau, New York Coalition for Alternatives to Pesticides, New York Public Interest Research Group, and the Environmental Advocate. As a result of these meetings several alternatives were selected for field testing this year. Deniz consulted with Dr. Hunn of Cornell University and Dr. Abrahamson of Syracuse University and developed testing protocol for the selected alternatives. Work on this initiative is continuing.
6. Osman Hag-Elsafi and Jonathan Kunin reviewed reports on an elliptical precast concrete arch bridge (BEBO) and discussed their comments with Matthew Royce of the Structures Division. They also developed a spreadsheet program to check some of the results discussed in the reports. The program is based on analysis of a general pinned-pinned arch system subjected to live load, dead load due to own weight and soil, and an assumed soil pressure. At the request of the Structures Division, the

Geotechnical Engineering Bureau is now reviewing the assumptions used in estimating soil dead and solid pressure.

7. Deniz Sandhu completed the analysis of the data from acceptance testing done on joints from last year's pilot projects. The results and recommendations were presented to Peter Melas of the Region 1 Construction group and Cindy Brown of Callanan Industries (co-chairs of the task force on developing acceptance specifications for longitudinal joints in hot mix asphalt pavements) on February 25, 1999.
8. Osman Hag-Elsafi, Jonathan Kunin, George Schongar, and Harry Greenberg cooperated in developing two procedures to retrofit lower chord members of a truss bridge over Unidilla River in Region 9. The first method proposed post-tensioning and the second proposed the addition of steel channel sections to strengthen existing rusted members. Based on the proposed procedures, live load capacities of the retrofitted chord members could be improved to as-designed load levels. A summary of the proposed procedures is now being reviewed by the Structures Division and the Region.
9. At the request of the Construction and Maintenance Divisions, Rick Morgan examined and reported on the installation of temporary rumble strips in Columbia County, Region 8. Rick also met with personnel from GEB to discuss distress surveys of their pavement monitoring sites and began preparations to begin surveys. Rick also performed two follow-up examinations of the temporary rumble strip installation on Route 9H, and he also observed the installation of temporary rumble strips on Route 78 in Erie County, Region 5 and performed a follow-up examination.
10. Julian Bendana met with Bonnie Premo and Gayle Burgess of State and Local Governmental Relations to discuss truck weight and axle configuration for comparison of pavement damage.

**12-38 CONSULTATION - Statistics**

This project covers statistical services provided by the Bureau's statistician to various clients throughout the Department. Some of the analyses provided during the program period include:

1. On October 5, 1998, Bob Valenti and Deniz Sandhu met with the members of the task force to shorten the consultant designation process. Based on the analysis of historical data the task force provided prior to the meeting, Deniz recommended a statistically based method to short-list the proposers. At a follow-up to the meeting on October 6, Deniz provided them with a flow chart to implement this statistical procedure in their computer programs.
2. Deniz Sandhu and Peter Bajorski completed the draft report on the statistical analyses of the friction data from sites containing blends of Wappinger dolomite and non-carbonate aggregates. The findings of the report were discussed with the clients during a meeting on November 23, 1998.
3. Peter Bajorski completed the analysis of the metal thickness data and developed a stochastic model for metal loss which takes into account censoring due to perforated culverts. Specific calculations of metal loss as a function of time were included in the written report provided to Michael Mathioudakis. Michael will be incorporating these results into the final report for the project.
4. Peter Bajorski received the preliminary data obtained from Phase II of experimental mixes of high-performance concrete. These will be compared with the results from Phase I of the study.
5. Deniz Sandhu worked with Ed Denehy of the Transportation Maintenance Division (TMD) and Larry Mulvaney of the Data Services Bureau in implementing the sampling plan developed for the TMD Quality Assurance Program. In addition to the sample of 600 miles of highway to be inspected by the residencies, sub-samples to be re-inspected by the Regional and Main Office personnel were also developed. Ryan Lund developed a data entry program and a database for the analysis of the data that will be generated from this program.
6. On July 1, 1999, Deniz Sandhu met with representatives from the Materials Bureau to discuss the final recommendations on testing high strength concrete using neoprene capped cylinders. The results of the statistical analyses and the recommendations were subsequently reported to the clients in a memo.
7. Deniz Sandhu provided statistical analyses and interpretation of the data comparing test results for asphalt binders collected in metal and cardboard containers for Chris Euler of the Materials Bureau.
8. Deniz Sandhu had several meetings with Charley Stone of Construction to determine the set-up and data collection requirements for a study that would compare various strategies to slow down traffic in work zones. The experimental design for a pilot study was developed. Two sites one in Region 9, one in Region 6, were selected for a pilot study that will take place this September.

Total Project	11762	11762	FFY 1999	10000
			FFY 2000	

**Description**

OBJECTIVE: The goal of this study is to verify the assumptions made for metal loss rates in the design of corrugated steel culverts. A large sample of the culverts included in the original study was located and visited to measure remaining metal thickness and observe their field performance. The study concentrated on Zone 2 culverts since the statistical analysis suggested a larger discrepancy in the metal-loss rates for this geographical area.

PROGRESS: Report completed.

SIX-MONTH PLAN: Project closed.

<b>TITLE</b>	CONST/EVAL NOISE BARRIER W/RECYCLED		
<b>PIN</b>	R01263881	<b>Date Project Initiated</b>	10/17/96

**Description**

OBJECTIVE: The goals are to explore methods of improving the ITS procurement process, to ensure that quality and performance factors are properly addressed in contracting procedures. The objectives are to: 1) examine past/existing Department ITS procurement, and contracting mechanisms; 2) gather information on national efforts to improve ITS contracting processes; and 3) recommend specific improvements for NYSDOT ITS procurement.

PROGRESS: Literature review and survey of NYSDOT and national contracting procedures are completed. ITS provisions in TEA-21 were analyzed.

SIX-MONTH-PLAN: Continue to analyze Department ITS procurement mechanisms and identify shortcomings of existing contracting for ITS services and develop contracting methods that may prove successful in adding quality to ITS contracting.

Transportation Research & Development Bureau**

### **13-0 IMPLEMENTATION**

Activities conducted under this project are directed at cooperating with Department staff in implementing the results of research conducted by the Bureau and other agencies. In the case of in-house research, this project permits "implementation follow-through" after the research projects are completed and terminated.

Activities will be undertaken primarily by Bureau staff and members of appropriate Department Technical Working Groups who will provide guidance on packaging, planning, promotion, and delivery strategies needed to assess new technologies or products. Bureau staff are available to assist end-users on both the evaluation and initiation of these new products and technologies, and provide a feedback loop for positive communication of findings.

1. Julian Bendana in conducting Mechanistic-Empirical analysis to update Table 1 of the "Thickness Design Manual for New and Reconstructed Pavements."
2. Osman Hag-Elsafi discussed with Bill McColl, Environmental Analysis Bureau, a plan to measure before- and after-construction noise levels at the barrier site in Long Island, for assessment of acoustic effectiveness of the barrier in blocking traffic noise.
3. Julian Bendana continued working on various design and construction issues on Route 9A construction.
4. Frank Owens and Sreenivas Alampalli completed a draft report entitled, "In-Service Performance of HP Concrete Decks," summarizing HP concrete deck survey responses. Copies of the report were forwarded to the clients for their review.
5. Sreenivas Alampalli, Osman Hag-Elsafi, and Frank Owens met with Larry Johanson and Bob Holt of the Structures Division, and Larry Brown, Rich Stempel, and Rich Marriott of DQAB to discuss a draft report on a proposed procedure for design of end- and base-plates of cantilevered traffic signal structures. Osman and Frank gave a presentation on the procedure and a demonstration of its spreadsheet implementation.
6. Julian Bendana met with Bill Snyder of Materials Bureau to finalize tie-bar design tables with PCC tied-shoulder and AC shoulders that will be used in the new standards using the latest changes in the ACI code. The new tables are for Grade 60 steel and 19 mm bars.
7. Frank Owens and Sreenivas Alampalli completed a draft report entitled "In-Service Performance of HP Concrete Decks." The draft incorporates client comments, and is expected to be published by the end of next month.

8. Structures staff met with the Structures Division on August 16, 1999 to discuss implementation of Reactive Powder Concrete by HDR, Inc. It was felt that this technology has a promise for future DOT projects and thus decided to be an observing partner of HDR projects utilizing Reactive Powder Concrete to gain a better understanding of the product.

**14-01 LOCAL TECHNOLOGY ASSISTANCE PROGRAM**

Cornell University, sponsored by the Department of Transportation and FHWA, has been contracted to provide training and technology transfer to local municipal highway personnel. These services are provided through formal instructional classes, direct mailings, conferences, and phone calls.

Activities conducted under this project during the program year included:

1. Cornell published its annual report highlighting its CY 1998 accomplishments. This report was reviewed by Transportation Research and forwarded to FHWA.
2. Transportation Research recommended and FHWA approved the 1999 work plan for LTAP.
3. In October, 1998, Robert Valenti attended the LTAP Planning Committee Meeting in Albany, New York. During this meeting, the agenda for the June, 1999 Annual Highway School was determined.
4. Cornell held its annual Highway Superintendents School on June 7-9, 1999 at Ithaca College, Ithaca, NY. Bob Valenti attended the planning committee meeting held immediately following the school.
5. Sam Elrahman attended the 1999 National LTAP Conference in July in Roanoke, Virginia. Strategic planning was the major theme of the conference.

**15-01 ENGINEERING COMPUTER SYSTEMS SUPPORT**

This project covers all activities performed by the Bureau's Senior Computer Coordinator, including planning, management, and maintenance of the hardware and software for the Bureau's computer network and personal computers. This function also includes software development and programming for Engineering Research projects and consultations.

Activities conducted under this project during the program year include:

1. Two color printers were added to the Bureau's network.
2. A new NT Workstation was added to the Structures section.
3. All Bureau PC's were upgraded to Pentium class machines.
4. Bureau's network services were migrated to the Geotechnical Engineering Bureau servers.
5. All PC's were upgraded to Windows 95 or 98 operating systems.

			<b>FFY 2000</b>	1000000

**Description** OBJECTIVE: To conduct a program of contract research to address Department research needs which cannot be handled by the Transportation Research and Development Bureau.

PROGRESS: One project, Economic Impacts of Transportation Investment, was completed. A no-cost time extension was processed to allow completion of on-going TIRC projects which were not finalized prior to expiration of the TIRC agreement. The following projects are underway:

1. CADD Expert System for Blowing Snow Control (\$530,000)
2. ITS Systems- Benefits and Costs (\$201,200)
3. Automating NYSDOT Data Collection (\$123,000)
4. Finite Element Analysis of an FRP Composite (\$50,000)
5. Managing TORT Liability (\$185,000)
6. Encouraging Economic Growth - Transportation Strategies for MPO's (225,000)
7. Maximizing Aggregate to Cement Ratio (275,000)

SIX-MONTH PLAN: The Department agreement with the Transportation Infrastructure Research Consortium (TIRC) has expired. The department initiated a Request for Proposals process. Two proposals were received in response to the solicitation. An evaluation Committee composed of Department executive management was formed. The Committee's task is to review proposals and select a new Transportation Infrastructure Research Consortium.

Four new studies are in the planning stage (1) Severance Damage Studies to Commercial Properties (\$50,000), (2) Evaluation of Best Practices to Control Storm Water Runoff (\$250,000), (3) Warrants and Guidelines for Portable Signals (250,000), (4) Improve Traffic Count-Based on VMT (250,000).

**Description**

OBJECTIVE: To develop a simplified test chamber. The SHRP device is cumbersome and would be difficult to assemble/disassemble as required for the test. To develop an automated test procedure, which will decrease the time and labor required to perform the SHRP test. To interpret results from the new test procedure and apparatus. To determine the relationships between the hydraulic-fracture test and aggregate performance. The expected speed of this procedure and a direct correlation of its results with other procedures would be a major improvement.

PROGRESS: Tests have been conducted and data analysis is in progress.

SIX-MONTH PLAN: Complete machine automation and conduct test and data analysis. Project has been extended due to allow for needed equipment modification.

**Description**

OBJECTIVE: Improve understanding of post-tensioning as a retrofit technique. Develop general design and construction guidelines for strengthening existing steel bridge members by post-tensioning.

PROGRESS: Study Proposal completed. No other progress due to lack of resources.

SIX-MONTH PLAN: Nothing planned due to lack of personnel resources.

---

## **SECTION III**

### **Proposed Projects Not Yet Initiated**

---

**New York State Department of Transportation  
Transportation Research & Development Bureau**

**93-052     DEVELOPMENT OF IMPROVED PAVEMENT PERFORMANCE PREDICTION  
MODEL**

**PROBLEM:**     The Department's current pavement management system plan calls for the development of model to predict performance of both rehabilitation and maintenance treatments, given site specific variables such as soils, climate, and traffic. Volume II of the Rehabilitation Manual only gives average expected service lives under limited conditions for each treatment. Predicts service life is an important input to the life-cycle cost analysis, whose results will decide the selection of the preferred treatment for each projects. NYSDOT does not have any formal and comprehensive pavements performance prediction models that can meet this pavement management requirement. The AASHTO pavement performance model that NYSDOT recently adopted was only calibrated with very limited past performance and experience.

**OBJECTIVE:**     Validate and calibrate the AASHTO performance model. Develop new models that can predicts the effect of each rehabilitation and maintenance treatment on safety, serviceability, and service life of a projects, by properly considering relevant variables including soils, climate, traffic drainage features, and existing pavements conditions.

**BENEFITS:**     At the project level, designs can be effectively made to accomplish the goals of improving safety and serviceability with the prediction models. The life-cycle cost analysis can yield more accurate results and the most cost-effective treatment can be selected. At the network level, the long-term future needs estimating can be based on the predicted service lives of the treatments.

**CLIENT:**     Technical Services Division  
Facilities Design Division

**New York State Department of Transportation  
Transportation Research & Development Bureau**

**97-021     ELASTIC BEHAVIOR OF STEEL BRIDGES**

**PROBLEM:** Load distribution to girders and forces on cross-frames are two issues related to the design of skewed steel bridges that have to be adequately addressed by AASHTO standard specifications (1). The effect of skew on dead-load and live-load distribution has been ignored by past specifications, and only the effect on live-load distribution has been included in the recent AASHTO LRFD specifications (2,3). However, more refined analysis of skewed bridges has shown that using LRFD specifications could result in significant error in estimating dead-load shear and reactions (4,5). Inaccurate estimation of these forces not only impacts girder design, but also bridge bearings and substructure design. Bearing and uplift problems during and after construction of skewed bridges are clear indications of inaccurate estimation of these reaction forces. The presence of cross-frames on skewed steel bridges tends to increase their torsional rigidity, and subsequently introduces unintended forces cross-frame members and connections. These forces are sometimes of sufficient magnitude to cause damage to the cross-framer members and its connections to the girders.

**OBJECTIVE:** The objective of this project is two fold: 1) to investigate elastic behavior of skewed steel bridges to determine significance of skew for: a) dead-load and live-load distribution to girders, b) reaction forces and displacements at bridge bearings during and after construction, and c) forces on cross-frame members and cross-frame connections to the girders; and 2) to develop guidelines for design and construction of skewed bridges that consider these issues. Using these guidelines, engineers may identify situations where skew effect is significant and special analysis or construction methods are required, or when conventional methods could be used instead.

**BENEFITS:** Results from this project could significantly affect current design and construction procedures for skew steel-girder bridges. Monetary savings as a results of implementation of the findings of this project should be expected, because construction and maintenance-related problems will be eliminated or minimized.

**CLIENT:** Structures Division

**SECTION IV**

**ADMINISTRATION/TRAINING**

---

**New York State Department of Transportation  
Transportation Research and Development Bureau**

**10-01 ADMINISTRATION**

A variety of recurring activities are required to administer the Bureau's research program. Charges are made on the basis of the particular service or function performed within the following categories:

**Managerial Operations:** The day-to-day activities which involve aspects of this Bureau's administration (e.g., inquiries, explanations, and justifications) which must be delegated, clarified, followed up, and finally resolved. These activities also deal with the broad general aspects of administration such as policy, procedures, balance, and funding of the research program. These tasks are performed exclusively by the Director and Section Heads. The level of effort varies among these individuals depending on their specific responsibilities and assignments.

**Program Development:** Efforts required to prepare and publish the Bureau's Federal Highway Planning and Research Work Program, and the submission of appropriate projects for consideration in the National Cooperative Highway Research Program (NCHRP), or to FHWA for consideration for administrative contract work, pooled-fund studies, or FHWA research are charged to this function.

**Program Control:** Activities under this function involve monitoring expenditures and work accomplished in relation to projected progress schedules and budgeted costs. It also concerns efforts directed toward ensuring that the research remains within the stated scope and objectives, and that marginal work or work which is no longer considered necessary by the requesting program manager is terminated.

Transportation Research and Development Bureau**

**16-0 TRAINING**

Activities conducted under this project are directed at providing continuing education and specialized instruction necessary for the completion of federal-aid projects. In this program period:

1. Wes Yang successfully coordinated and hosted FHWA Demonstration Workshop #115 on Life Cycle Cost Analysis on September 9 and 10, 1998 in Albany, NY. A total of 35 participants from the Main Office, Regional Office, Thruway, and Cornell University attended the workshop. Life-cycle-cost analysis technique, user cost, and probabilistic approach were discussed in the workshop. The workshop was well conducted by FHWA and was well received by all participants.
2. Bob Valenti attended the 5<sup>th</sup> Statewide Conference on Local Bridges held in Syracuse on October 28 - 29, 1999 as part of his steering committee and training subcommittee responsibilities.
3. On November 20, 1998 Bob Valenti conducted an afternoon seminar for graduate students at the University of South Florida on the topic of current funding levels for transportation research programs. He did this at the request of Dr. Jian Lu, a Civil Engineering Professor at USF and former researcher in TR&DB.
4. Cheng Chou attended a four-day NHI training course on "Techniques for Pavement Rehabilitation" on November 3-7, 1998 in Region 8 (Poughkeepsie).
5. Sreenivas Alampalli discussed developing a course on bridge design using advanced composites with FHWA, who agreed to contribute up to \$2000 to cover course expenses. RPI, Union College, and Foster Miller, Inc. expressed their interest in developing the course. Sreenivas will discuss this matter with the Structures Division. Course attendance will be open to Department and FHWA engineers, as well as representatives from New England states.
6. On June 2, 1999 Bob Valenti attended the Excellence at Work Conference sponsored by the Empire State Advantage Program.
7. Jonathan Kunin and Sreenivas Alampalli are coordinated a Composite Workshop August 23, 24, and 25, 1999. The classes and laboratory sessions were held at Union College. The syllabus and invitations to the course went to FHWA, Materials, Structures, Geotechnical Engineering, and the Regional Structure Engineer. Ryan Lund, Cheng Chou, Jonathan Kunin, Sreenivas Alampalli and Tadeusz Alberski from TR&DB attended the Composite Materials Workshop. Frank Owens and Osman Hag-Elsafi attended the FRP column wrapping demonstration.
8. Frank Owens organized and attended a July 26, 1999 presentation by HDR Engineering on structural uses for reactive powder concrete and possible demonstration projects. Sreenivas Alampalli and Jonathan Kunin also attended the meeting. A follow-up meeting to discuss NYSDOT interest in the material and funding mechanisms for a demonstration project has been scheduled. Tim Conway from Region 1, John Formosa from FHWA, Joe Savoie from Structures, Jonathan Kunin, Sreenivas Alampalli and Frank Owens from TR&DB attended the meeting.

**Description**      OBJECTIVE: To predict the temperature and water fraction profiles that exist during the first 72 hours of curing in concrete pavements and bridge decks using conventional (Class H) concrete or high performance (Class HP) concrete, and to determine under what conditions concrete can be successfully placed.

PROGRESS: (1) Conducted a field experiment on RT. 30 Bridge in Montgomery Co. for verifying 2-dimension model applied to HP concrete bridge deck, (2) completed a series of Experiments for determining the cement hydration rate and heat generation rate of HP concrete during curing, (3) completed final report.
